Objectives

Work in a dynamic environment with motivated and professional people. And be able to use my skills to help a team to achieve its goals and of course learn more new techniques.

Professional Experience

September 2002 – October 2009, STIB-MIVB (Brussels Inter regional Transport Company)

Job description: I was responsible for the development of the Sales application running in the so-called Kiosk and Bootik sales points. The main sales application was written in Windev (evolution Windev 7.5 – Windev 14). For this part of the application I wrote several DLL's (either in C# or for low level operations in C++) to :

Integrate the EID (Electronic ID card) to fill in the address and personal data fields of the sales application.
Communication with the Prodata ticketing hardware (Validators in buses, trams and Metro stations). Part of this layer was in C++ because for the need of speed between communication layers.

The second main part of the job consisted in coordinating several foreign companies (Portugal, France and Belgium) in order to establish the MOBIB card. The MOBIB card is a wireless chipcard based on ISO1545 (Calypso Project Paris). I participated in the establishment of the Data Model of

the on-board file structure to fit the needs of the STIB-MIVB.

For the new sales application I wrote also the so-called VendorCard Library, which during a sales session continuously stores the sales operations of the vendor on a Mobib card, this card also serves as login to the application. When a sales session is terminated, the data on the card is translated into XML and via XSLT the sales person receives his sales report.

ASP.NET Development for the accounting department, consisting of consultation of sales sessions and their balance.

Degree : Analyst (after internal exam)

Obtained also the Selor Level 3 exam for French

Software used : Oracle 10g, SQL, Pro C/C++, C#, C++, SQL Navigator, Windev, Stylus Studio (XML-XSLT), Microsoft Project, Visual Source-Safe, Enterprise Architect.

Methodology : RUP

February 2000 – August 2002, Chronos Technologies

Project Leader for the Directorate Budget Management of the European Commission.

Tasks : Coordination of a team of 10 developpers working on the budgetary application that provided the annual Budget report to the European Parliament.

Software used : Oracle 8.5, SQL, SQL Navigator, Rational Rose, Microsoft Project.

April 1995 – March 2000, Three-i Consulting

Did consultancy for several companies:

European Commission, Directorate 'ESPRIT'

- Development in VB 6.0
- Trainer for Microsoft Office
- Help-Desk management

Goodyear

- Document Management System (Written in Borland Delphi 6)

RMB (Regie Media Belge)

- Development of an Extranet in ASP, this development allowed RMB to streamline publicity on several TV channels.

Mobistar

- Development of subscription payments via Banking.

BOIC (Belgian Olympic Committee)

- Development of an internal document management system (based on Access)

Erasmus Hospital Brussels

- Decoding of the MRI images which are in DICOM format to JPEG, thus allowing to publish these images for differential diagnosis on the Internet. Project 'Leonardo'. Portions of this application were written in Java (Image conversion and download from the MRI scanner, who in fact contains a FTP server). The other part of the application (the publication of the data) was written in Visual Basic 6.0.

June 1992 – March 1995, Office IT

Worked in the Directorate Informatics of the European Commission, I developed there the internal hardware inventory system (still used today). Written in VB.

May 1989 – May 1992, Krediet Bank
